

# Lists

Lists are continuous, vertical indexes of text or images.

Check out the latest remote job listings from Authentic Jobs.

ads via Carbon

Lists are a continuous group of text or images. They are composed of items containing primary and supplemental actions, which are represented by icons and text.

[View as Markdown](#)[Feedback](#)[Bundle size](#)[Source](#)[Material Design](#)[Figma](#)[Sketch](#)

## Introduction

Lists present information in a concise, easy-to-follow format through a continuous, vertical index of text or images.

Material UI Lists are implemented using a collection of related components:

- List: a wrapper for list items. Renders as a `<ul>` by default.
- List Item: a common list item. Renders as an `<li>` by default.
- List Item Button: an action element to be used inside a list item.
- List Item Icon: an icon to be used inside of a list item.
- List Item Avatar: an avatar to be used inside of a list item.
- List Item Text: a container inside a list item, used to display text content.
- List Divider: a separator between list items.
- List Subheader: a label for a nested list.

  <Box sx={{ width: '100%', maxWidth: 360, bgcolor: 'background.paper' }}>
    <List component="nav" aria-label="main mailbox folders">
      <ListItemButton
        selected={selectedIndex === 0}
        onClick={(event) => handleListItemClick(event, 0)}
      >
        <ListItemIcon>
          <InboxIcon />
        </ListItemIcon>
        <ListItemText primary="Inbox" />
      </ListItemButton>
      <ListItemButton
        selected={selectedIndex === 1}
        onClick={(event) => handleListItemClick(event, 1)}
      >
        <ListItemIcon>
          <DraftsIcon />

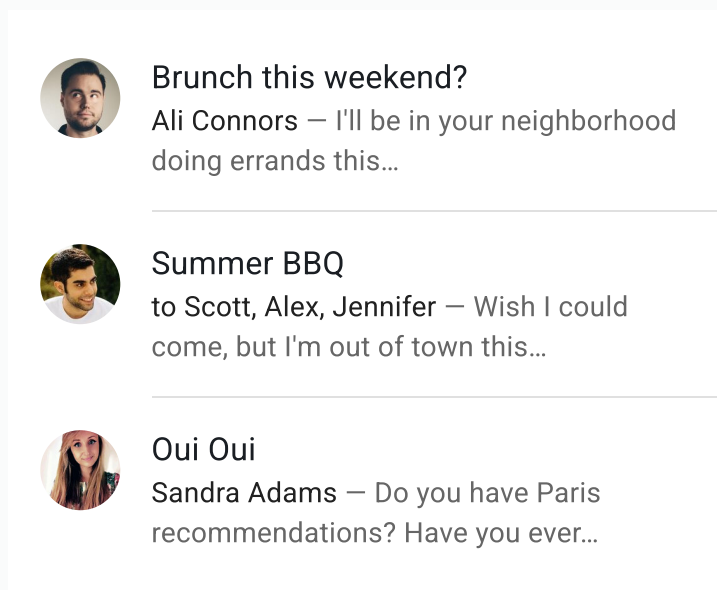

```

## Align list items

When displaying three lines or more, the avatar is not aligned at the top. You should set the

`alignItems="flex-start"` prop to align the avatar at the top, following the Material Design guidelines:

[Edit in Chat](#)

JS

TS

[Hide code](#)

```

import * as React from 'react';
import List from '@mui/material/List';
import ListItem from '@mui/material/ListItem';

      <ListItem alignItems="flex-start">
        <ListItemAvatar>
          <Avatar alt="Remy Sharp" src="/static/images/avatar/1.jpg" />
        </ListItemAvatar>
        <ListItemText
          primary="Brunch this weekend?"
          secondary={
            <React.Fragment>
              <Typography
                component="span"
                variant="body2"
                sx={{ color: 'text.primary', display: 'inline' }}
              >
                Ali Connors
              </Typography>
              {" – I'll be in your neighborhood doing errands this..."}
            </React.Fragment>
          }
        </ListItemText>
      </ListItem>
      <Divider variant="inset" component="li" />
      <ListItem alignItems="flex-start">
        <ListItemAvatar>
          <Avatar alt="Travis Howard" src="/static/images/avatar/2.jpg" />
        </ListItemAvatar>
        <ListItemText

```

## List Controls

### Checkbox

A checkbox can either be a primary action or a secondary action.

The checkbox is the primary action and the state indicator for the list item. The comment button is a secondary action and a separate target.

<input checked="" type="checkbox"/>	Line item 1	
<input type="checkbox"/>	Line item 2	
<input type="checkbox"/>	Line item 3	
<input type="checkbox"/>	Line item 4

  const [checked, setChecked] = React.useState(['wifi']);

  const handleToggle = (value: string) => () => {
    const currentIndex = checked.indexOf(value);
    const newChecked = [...checked];

    if (currentIndex === -1) {
      newChecked.push(value);
    } else {
      newChecked.splice(currentIndex, 1);
    }

    setChecked(newChecked);
  };

  return (
    <List
      sx={{ width: '100%', maxWidth: 360, bgcolor: 'background.paper' }}
      subheader={<ListSubheader>Settings</ListSubheader>}
    >
      <ListItem>
        <ListItemIcon>
          <WifiIcon />
        </ListItemIcon>
```

```
<ListItemText id="switch-list-label-wifi" primary="Wi-Fi" />
<Switch
  edge="end"
```

## Sticky subheader

Upon scrolling, subheaders remain pinned to the top of the screen until pushed off screen by the next subheader. This feature relies on CSS sticky positioning.

I'm sticky 0

Item 0

Item 1

Item 2

I'm sticky 1

Item 0

[Edit in Chat](#)[JS](#)[TS](#)[Hide code](#)

```
import List from '@mui/material/List';

import ListSubheader from '@mui/material/ListSubheader';
```

```
export default function PinnedSubheaderList() {
  return (
    <List
      sx={{
        width: '100%',
        maxWidth: 360,
        bgcolor: 'background.paper',
        position: 'relative',
        overflow: 'auto',
        maxHeight: 300,
        '& ul': { padding: 0 },
      }}
      subheader={<li />}
    >
      {[0, 1, 2, 3, 4].map((sectionId) => (
        <li key={`section-${sectionId}`}>
          <ul>
```

```

<ListSubheader>{`I'm sticky ${sectionId}`}</ListSubheader>
{[0, 1, 2].map((item) => (
  <ListItem key={`item-${sectionId}-${item}`}>
    <ListItemText primary={`Item ${item}`} />
  </ListItem>
))}
</ul>
</li>
))}
</List>
);
}

```

## Inset List Item

The `inset` prop enables a list item that does not have a leading icon or avatar to align correctly with items that do.

import IconButton from '@mui/material/IconButton';

export default function GutterlessList() {
  return (
    <List sx={{ width: '100%', maxWidth: 360, bgcolor: 'background.paper' }}>
      {[1, 2, 3].map((value) => (
        <ListItem
          key={value}
          disableGutters
          secondaryAction={
            <IconButton aria-label="comment">
              <CommentIcon />
            </IconButton>
          }
        >
          <ListItemText primary={`Line item ${value}`} />
        </ListItem>
      ))}
    </List>
  );
}

```

```
);  
}
```

## Virtualized List

In the following example, we demonstrate how to use [react-window](#) with the `List` component. It renders 200 rows and can easily handle more. Virtualization helps with performance issues.

Item 1

Item 2

Item 3

Item 4

Item 5

Item 6

Item 7

Item 8

Item 9

[Edit in Chat](#)[JS](#)[TS](#)[Collapse code](#)

```
import Box from '@mui/material/Box';  
import ListItem from '@mui/material/ListItem';  
import ListItemButton from '@mui/material/ListItemButton';  
import ListItemText from '@mui/material/ListItemText';  
import { List, RowComponentProps } from 'react-window';  
  
function renderRow(props: RowComponentProps) {  
  const { index, style } = props;  
  
  return (  
    <ListItem style={style} key={index} component="div" disablePadding>  
      <ListItemButton>  
        <ListItemText primary={`Item ${index + 1}`} />  
      </ListItemButton>  
    </ListItem>  
  );  
}
```

```
export default function VirtualizedList() {
  return (
    <Box
      sx={{ width: '100%', height: 400, maxWidth: 360, bgcolor: 'background.paper' }}
    >
      <List
        rowHeight={46}
        rowCount={200}
        style={{
          height: 400,
          width: 360,
        }}
        rowProps={{}}
        overscanCount={5}
        rowComponent={renderRow}
      />
    </Box>
  );
}
```

The use of [react-window](#) when possible is encouraged. If this library doesn't cover your use case, you should consider using alternatives like [react-virtuoso](#).

## Customization

Here are some examples of customizing the component. You can learn more about this in the [overrides documentation page](#).
